# ABN AMRO
HELLO WORLD WORKSHOP

Building up your storyboard

1. Begin by giving the background a background color: Select the SuperView. Select the Attributes inspector. Choose 'Group Table View Background Color'
2. Drag a object from the object library on to your storyboard and name it correctly. You can edit the name on the left side, under 'View Controller Scene'. There you can find all the objects that you added to the storyboard.
3. Give the object a width and a height by adding new width and height constraints. You can achieve this by clicking on the 'Adding a new constraint' icon, in the bottom right of your screen.
4. Pin the view to the superview, either by adding new constraints from object to object, or by aligning the view in the superview (you can find both buttons at the bottom right of your screen).
